

### INFO

IMET was founded in 1988 and is one of the pioneering companies in the development and manufacture of radio remote controls. The first products were initially designed for construction operations and concrete processing.

## KRON: the new robust and innovative radio remote control from IMET

IMET innovates with a new remote control for greater freedom of movement

Miriam Spada

IMET innovates... and with the opportunity of the new M880 series, launches a new radio remote control with an extremely ergonomic design: KRON.

The new model was realized aiming at having the highest performance contained on a minimal size. Its ergonomics help the operator to have a greater freedom of movement, without compromising the safety and the comfort in the working environment.

Designed for truck-cranes with 4 to 5 functions, it also suited for other mobile applications of the industry and construction sectors.

The KRON is equipped with a practical clip for fast hooking on the trouser belt or pocket.

You will be surprised to discover how easy and effortless it is to handle the KRON; a lightweight device that's equipped with a compact handle, which will make any operation easier and comfortable.

The new model is available in three versions: Basic, Standard and Plus, accommodating to the customers' request and to the desired performance of their machines.

The Basic model is suitable for little cranes that need simple and basic functions; while the Standard version incorporates all previous functions of the M550 series. The top tier, the Plus version, additionally, allows the lighting of the crane beacons (if present) and features an innovation: the indication of the machine's 90% and 100%

achieved load level by means of dedicated LEDs on the radio remote control panel.

IMET listens always to what customers have to say. It then designs tailored products to meet these requests. Indeed, IMET's flexibility to satisfy the more complex requests cannot be beaten. You may want to try it! ◀
