

Flexibility, safety and ergonomics: IMET New Series M880

els, which have been designed for the most traditional applications, such as construction cranes, bridge cranes, etc., the company places at the disposal of its customers a staff of technicians that is specialized in the design and creation of customized models of radio remote controls, according to specific requirements.

IMET's sale network covers 30 countries around the world. The successful growth finds its root in the idea of maintaining design and production processes totally inside its facilities. ◀

[JOHN MELEGATTI]

IMET was founded in 1988 and is today, one of the pioneering companies in the development and manufacturing of industrial safety radio remote controls. IMET is a blend of individuals who pool their talents to listen to the market and to customer needs. IMET has thus given a strong response in terms of flexibility, safety and ergonomics; in one word, the M880 solution.

The new models WAVE2, ARES2, KRON, ZEUS2 and THOR2, are the result of the experience gathered over years and the combination of high-level technical skills. All models present important features, like the STOP circuit, which ensures the highest level of

security in accordance to European and international standards; the newly designed boxes realized with high-resistance material and capable of operating at a -25°C to 70°C working temperature range. All new radio remote controls can memorize each event that has caused a breakdown or a crash, as well as the its actual working hours.

A dedicated diagnostics tool allows you to set and check the main operating parameters and to view the list of the most significant events that have occurred, by simply interfacing it to a PC and to the remote control. All models are equipped with "AFA" (Adaptive Frequency Agility) technology. It prevents the risk of lost of communication due to interferences.

The radio remote control continuously searches and selects the less impeded channel among the available ones. Another feature is the optional PIN code, which allows you to set a customizable safety pin code, so that the device can only be used by authorized personnel. In addition, removable and rechargeable NiMH batteries have been introduced with the new series. They allow a superior battery life and ensure a negligible memory effect. Today, IMET can boast a very wide and articulated range of products, capable of suiting the majority of requirements inside the industry, the construction, agricultural sectors and many more. In addition to the standards mod-
